

Tables

Inserting a Table on Your Web Page

1. Place the cursor where you would like your table to appear
2. Click on the table icon on the toolbar or click on the *Insert* menu, then *Table*

3. The *Insert Table* dialog box appears:
 4. Enter the amount of rows and columns your table will have
 5. You can alter the width of your table in pixels or percentages. If you leave 100% selected your table will be the width of your web page. Lowering this number will make your table width smaller.
 6. Enter a number for your border width (in pixels). The bigger the number, the fatter the border will be. If you choose to have no border appear for your table, place a 0 in the field. ****Note:** Composer will show a red dotted line to indicate the table borders as zero. When viewed in a browser, this red dotted line will not appear
 7. Click OK to have your table created
